DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

- Claims 1 and 2 are rejected under 35 U.S.C. 102(e) as being anticipated by Ratakonda.
 - Claim 1: A method for processing digital images received in the form of compressed video streams comprising the step of;

Determining a region of intensity histogram based on information on motion compensation of inter-frames. (See Ratakonda column 16 lines 9-17 as well as column 11 line 45 wherein he teaches that motion implies a change in intensity, thus the histogram is by nature a region of intensity histogram.)

Claim 2: The digital video processing method according to claim 1, before step (a), further comprising the steps of;

Receiving video streams (See figure 7 item 132, these bit streams are video.)

Art Unit: 2613

Grouping the video streams into a plurality of groups using a predetermined algorithm; (See column 4 lines 36-29 clearly implying that the video sequences are segmented into groups.)

Selecting a group to be processed. (See column 14 lines 28-47 wherein he shows that he is working on a selected sequence not the whole bit stream.)

Wherein in the step (a) the RIH of the selected group is determined based on information on the motion compensation of inter-frames. (See column 14 lines 37-41, as well as column 16 lines 9-17.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Charles E Parsons whose telephone number is 703-305-3862. The examiner can normally be reached on M-TH 7AM to 5 PM.
